Art Unit: 3652

1. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they do not include the following reference sign(s) mentioned in the description: 105, 143. A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claim 4 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

There is no basis in the specification that the new component may be a media player.

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Art Unit: 3652

5. Claims 7-9 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claims 7 and 9, --at least one-- should be inserted before "picker".

In claim 8, "area" should be --zone--.

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

8. Claims 1-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Dang et al (US 5,663,938).

Dang et al show a data storage library containing modular receptacles and pickers which can be connected together and added in any combination to scale the library as desired, wherein the library can continue to operate in the event of failure of any component. Although not explicitly stated, it is considered inherent that the level of sophistication of the apparatus is such that any new component would be integrated "by auditing the content and function" thereof, absent any further limitations.

Although the modules are described as being easy to service upon failure thereof, Dang et al do not explicitly state that the library continues to operate during connection of a new component. However, since the library does continue to operate when one or more modules fail, it would have been obvious for one of ordinary skill in the art at the time of the invention to have modified the operating method of the Dang et al apparatus such that it would continue to operate not only in the event of failure of a component, but also during the actual servicing/replacement thereof, which would be equivalent to connection of a new component, as this would simply be a logical extension of the concept espoused by Dang et al (i.e., minimizing downtime), the incorporation of which would neither require undue experimentation nor produce unexpected results.

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
